

KLARKTEK 1176-KT

Classic FET-Style Compressor with MIDAS transformers

Order code: 1176-KT

RRP: \$1,149.00

Our Price: \$1,099.00

What's all this, then?

Klark Teknik has put their own twist on the classic 1176L FET-Style limiting amp, by throwing in some Midas input and output transformers and calling it the 1176-KT. Designed as an homage to the classic 1176L, the effort was made to keep the 1176-KT FET-Style Compressor true to the original D and E versions while making it a more modern, iconic signal processor. Klark Teknik has "modernized" the completely discrete signal path using high-quality components in addition to their "custom-engineered" MIDAS input and output transformers" to offer you the best performance in either a studio or live sound setting (both).

1176-KT Compression Ratio Settings:

Like the original, the compression ratio is selected by pushing any, or all, of the Ratio buttons located to the left of the VU meter. Ratios available are: 4:1 for mild compression; 8:1 for severe compression; 12:1 for mild limiting; and 20:1 for hard limiting. Using "Soft" Button mode can be especially effective when used on drums, bass, guitar, and room mics — or for more aggressive "in your face" vocals.

There's a lot to like about Klark Teknik's version of the 1176, especially the price! If you want to watch someone recite the words from KT's website, without actually plugging signal through the 1176-KT, knock yourself out and hit the video tab below...
