

PIONEER PRO DJ DJS-1000

Standalone DJ Sampler - 16 pads, step sequencer

Order code: DJS-1000

RRP: \$1,799.00

Our Price: \$1,699.00

Pioneer DJS-1000 offers a 'booth friendly' version of the acclaimed TORAIZ SP-16, ready to slot nicely between your CDJ-2000NXS2 and DJM-900NXS2.

Multi-coloured Performance Pads

Sitting smack bang in the middle – where you normally see the jog-wheel, are the 16 large performance pads. Use these pads to trigger the tracks you've assigned samples and loops to. Each one is equipped with multi-coloured RGB illumination and high velocity detection, so you can increase or decrease volume with the amount of pressure you apply. **Born to Perform**

Of course, you can sit in the studio preparing your treats to drop into your set, but DJS-1000 also allows you to strike when the moment hits, mid-set. You can easily sample input sounds and immediately use them as individual tracks. The sampled sounds are automatically synchronised with the current set, so they can be dropped straight into play in a loop, so they can be dropped straight into your remix.

Accurate Sync with external devices

DJS-1000 includes Beat Sync1 function which can synchronise a performance by beat/bar with a track playing on a CDJ-2000NXS2 or XDJ-1000MK2 set-up using PRO DJ LINK. Use the tempo slider and the nudge buttons to quickly adjust tempo and beat position manually, just like you would on a turntable.
