

RODE NTG4+

Shotgun Microphone with Rechargeable Lithium Battery

Order code: NTG4+

RRP: ~~\$499.00~~

Our Price: \$379.00

Launched at the start of 2015 (along with the battery version, NTG4), the NTG4PLUS is yet another step in the evolution of Rode's much loved audio gear for film making.

NTG4+ is the very first microphone to feature an internal rechargeable lithium battery that provides 150+ hours of operation. It also features the convenience of USB charging. It's a shotgun microphone with three digital switches - they control the -10dB pad (useful for high SPL), High Pass Filter (flat/75Hz), plus a HF boost (helpful when using heavy-duty windjammers & fluffyies).

At just 176g, it's perfect to mount on a camera. If you've got a more serious shoot, by the way, the boom-mounted NTG4+ is also available. The all-new 1/2" condenser capsule can take 135dB SPL, has a low noise floor, high sensitivity, and a rich, smooth character.

If you don't need the internal battery option, check out the NTG4, which is 50g lighter, and a little shorter.
