

RODE RODECASTER PRO

Integrated Podcast Production Console with APHEX on board

Order code: RODECASTERPRO

RRP: ~~\$949.00~~

Our Price: \$849.00

Rodecaster PRO is a fully integrated podcast studio with APHEX on board.

Well, that's the short version... Let's dig deeper quickly as we can, because this is an impress from RODE.

Input Connections - 4 XLR microphone preamp for either dynamic or condenser style microphone audio geeks, when we listen to podcasts recorded in a 'bad' room, it's always a little 'cringey' to hear a condenser microphone pick up the room sound. This is why we love dynamic, end-address mics for podcasting.

4 headphone outputs, each with its own volume knob. A switchable headphone limiter ensures no dead air spikes. Left and right TRS speaker outputs provide quality playback listening, or can feed a PA for an audience if podcasting live.

"You're on the air, caller" - connect your phone to Rodecaster Pro via Bluetooth or with a cable. Rodecaster Pro automatically mutes the phone when you start recording, mix-minus to prevent echo, allowing you to concentrate on making a great podcast, without needing to set up complex signal routing or cables.

What does this button do? - the 8 sound pads are super handy for instant triggering of effects, music, jingles, applause and ads. Record audio direct to the pads from any of the audio inputs, or drag and drop files from your computer using the supplied software. For visual nerds, select the colour you want for the pad illumination.

APHEX on board - despite the nice colours and slick appearance, Rodecaster PRO is definitely not a toy. Record straight to microSD card, or to your DAW via USB. The included APHEX processing gives some serious 'oomph' to your sound, with super-simple 'single touch' set up.
