

## ART ARTS8-2WAY

Eight Channel Mic Splitter

Order code: ARTS8

RRP: ~~\$549.99~~

**Our Price: \$399.00**

Need to mix a live performance, and record a time? Unless you're running a digital console with easy-breakout-snake patching, you'll need a microphone splitter to ensure your recorder and mixer both get a clean signal.

Each channel of the S8 provides one direct and one transformer isolated output from a single microphone. The direct outputs pass phantom power from the main mixer to the microphones for use with condenser microphones.

The S8 includes a ground-lift switch on each input to reduce noise due to ground loops between connected equipment. For versatility the S8 also features an attenuator pad switch on each input to be used to connect preamplified signals to the microphone-level outputs on each channel. Typical preamplified signals would originate from instruments, preamplifiers, mixers, keyboards, et cetera.
